

# STRUCTURE AND FUNCTIONAL CHARACTERISTICS OF SEAMOUNTS ECOSYSTEMS

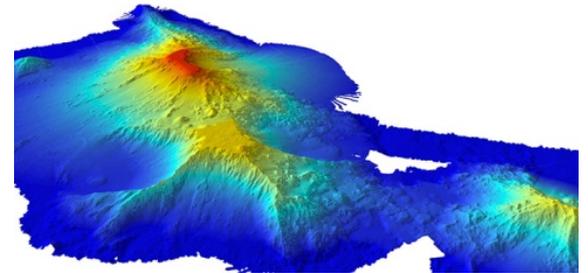

TINA MOLODTSOVA

*P.P. SHIRSHOV INSTITUTE OF OCEANOLOGY RAS*

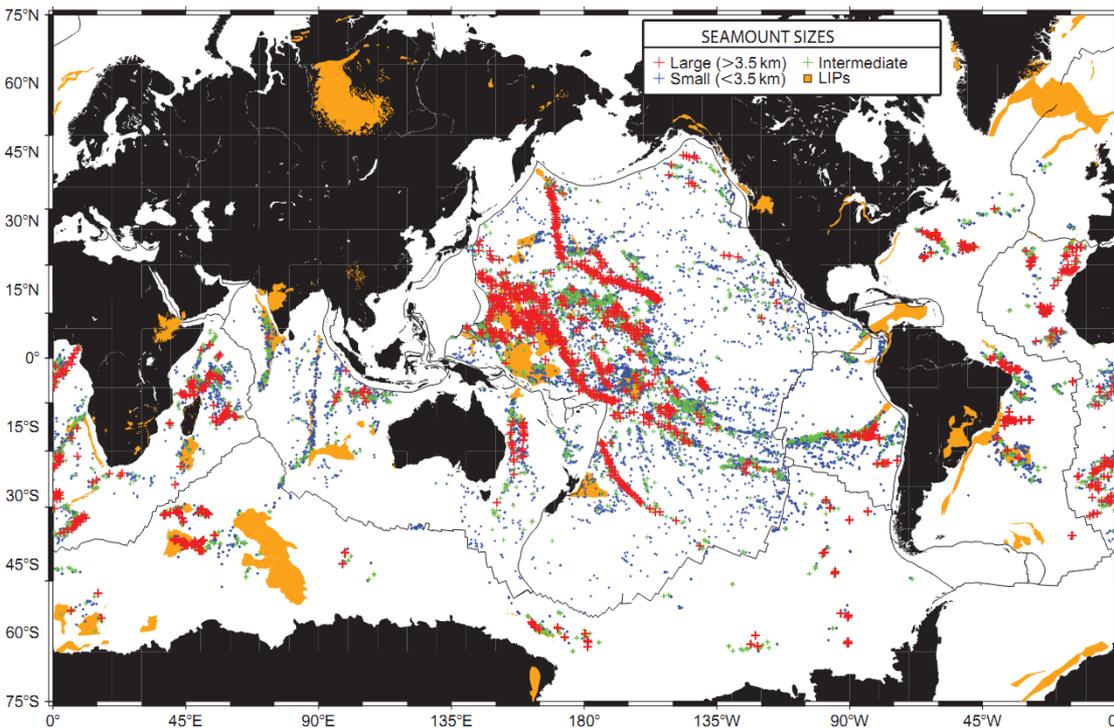

# Presentation outline

- General characteristics of seamounts
- Communities distribution at seamounts
- Factors influencing community structure
- Hydrological patterns and productivity
- Communities of seamounts. Benthic-pelagic coupling and trophic structure
- Benthic assemblages of seamounts
- Age and longevity
- Gaps and concerns

# Seamount characteristics

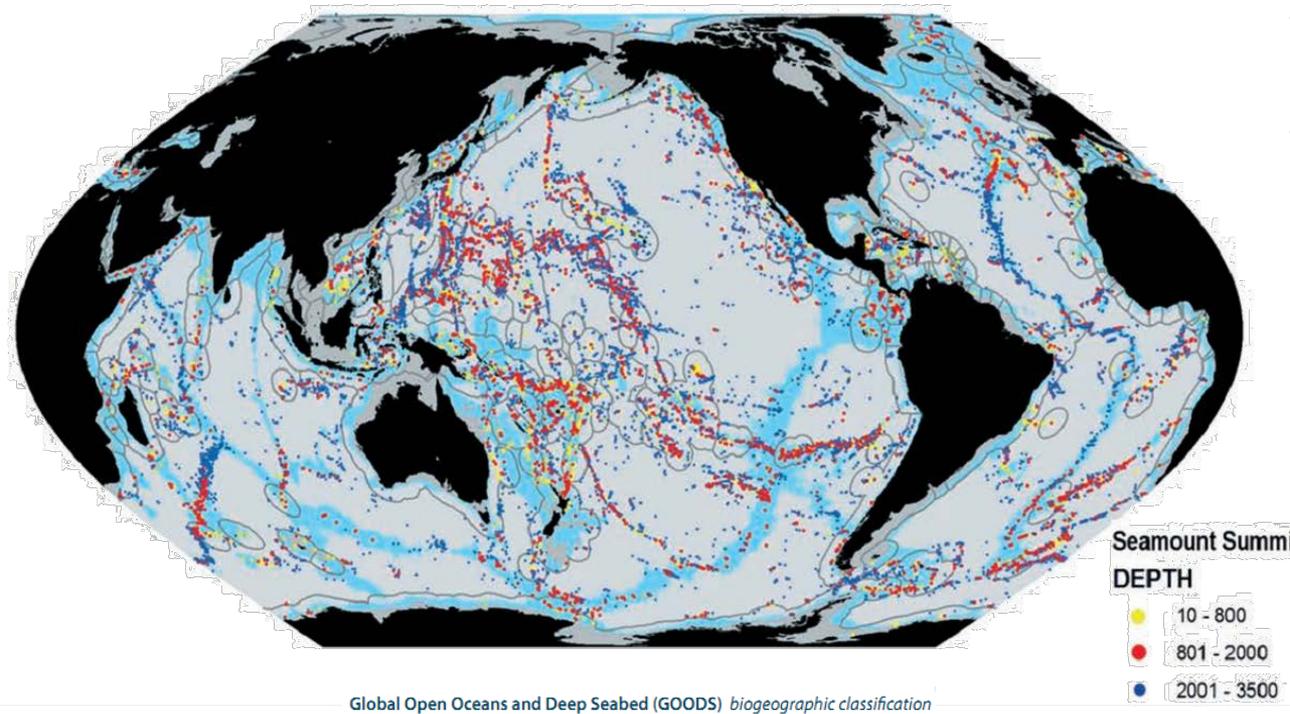

*Seamounts: Ecology, Fisheries & Conservation*

- undersea features with elevation >1000 m above the seafloor
- mostly volcanic in origin
  - island arc seamounts
  - mid-ocean ridge seamounts
  - intraplate seamounts
- Based on 30-arc bathymetry 33452 seamounts
- habitat area ~ 17.2 million km<sup>2</sup>

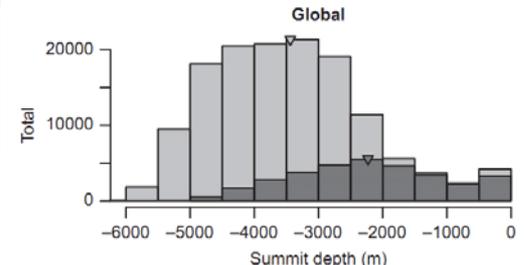

# Seamount characteristics

- Shallow , medium and deep seamounts
- Mean depth distribution for summits ~2229 m

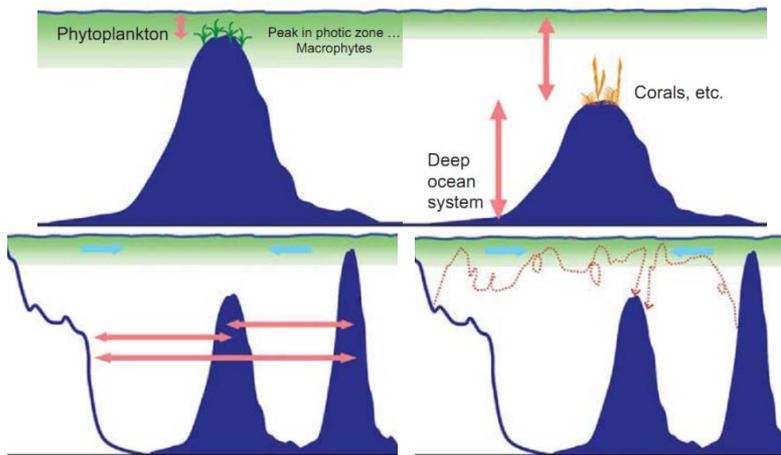

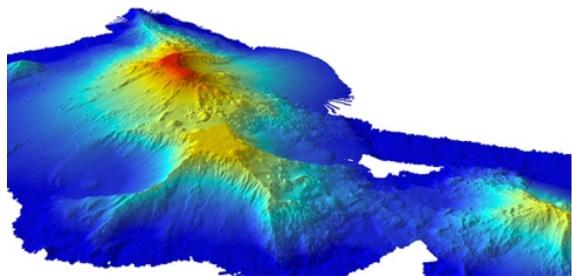

Global Open Oceans and Deep Seabed (GOODS) biogeographic classification

the depth of the summit  
relative to the sea surface

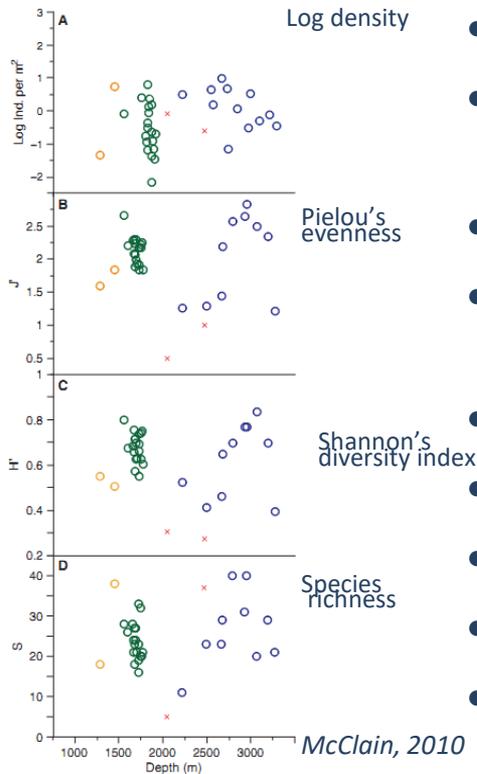

C. Yesson et al. / Deep-Sea Research I 58 (2011) 442–453

# Factors influencing community structure

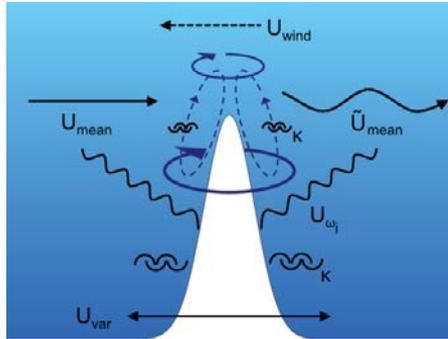

## Davidson Seamount

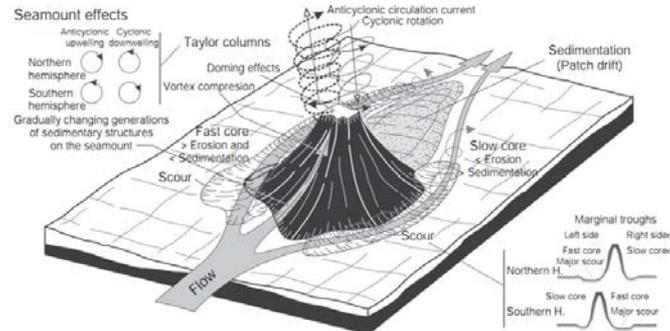

- Geomorphology
- Depth
- Distance from the mainland
- Origin
- Geologic history (sea level change, secondary volcanism)
- Salinity
- Latitude/longitude
- Complex hydrology
- Substratum composition
- Sedimentation patterns

# Hydrological patterns

Flow patterns at isolated seamount (NH)  
W. Lavelle, C. Mohn, 2010

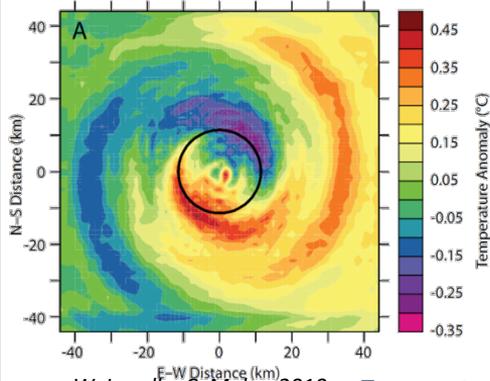

F.J. Hernández-Molina et al.

- influence local and global oceanic hydrological patterns:

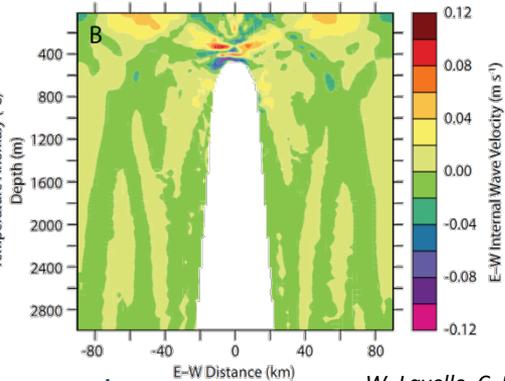

- turbulence
- upwelling
- downwelling
- tidal flows
- Taylor columns
- internal waves
- trapped waves

- in turn influence geomorphology and sedimentation patterns

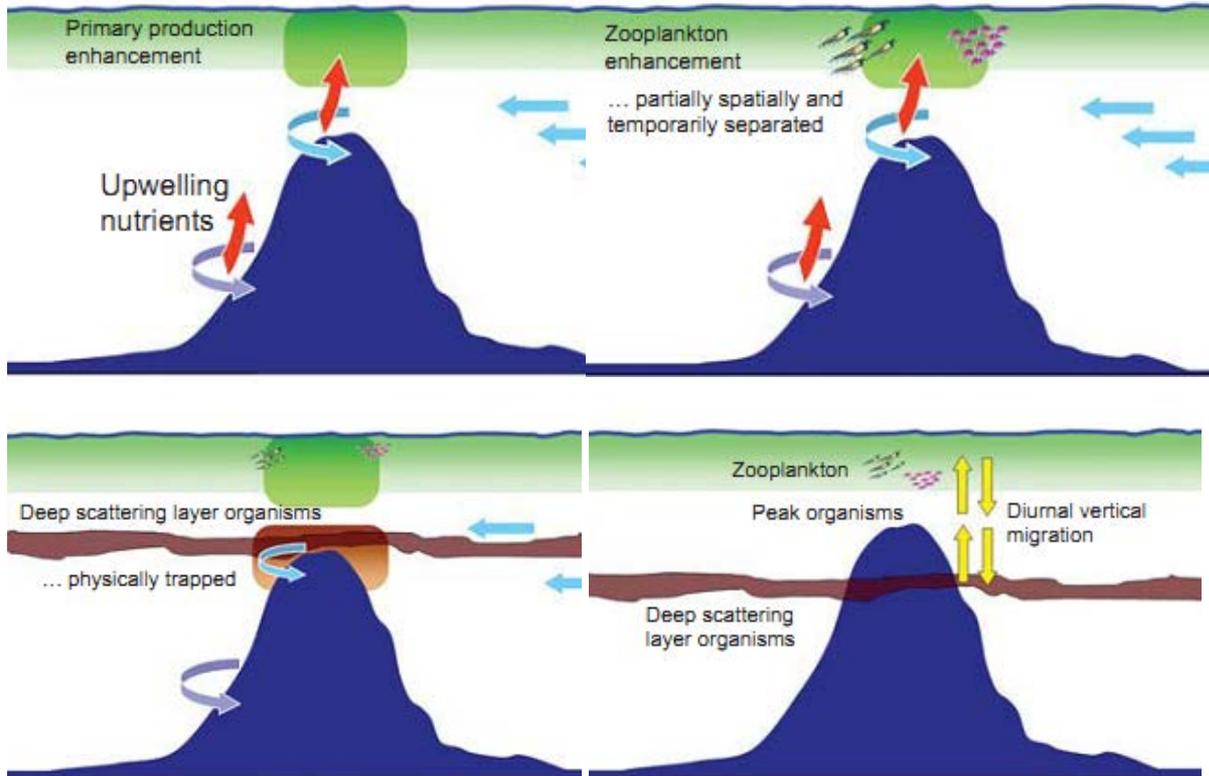

W. Lavelle, C. Mohn, 2010

Temperature anomaly

W. Lavelle, C. Mohn, 2010

# Hydrological patterns

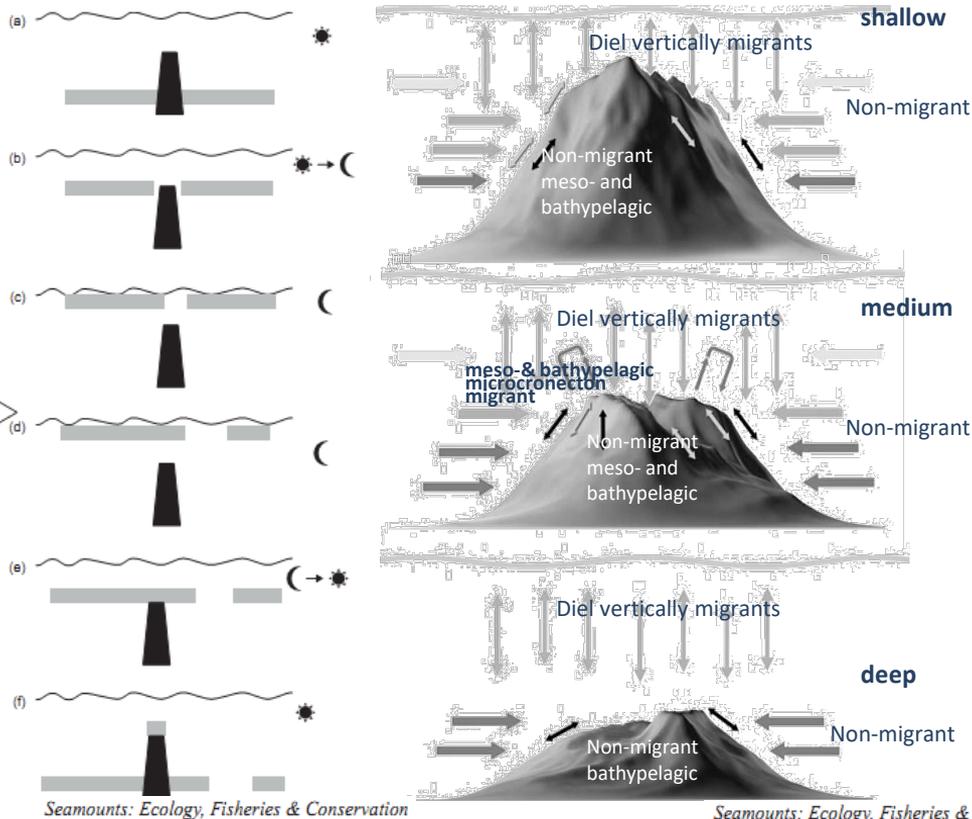

Tony J. Pitcher and Cathy Bulman *Seamounts: Ecology, Fisheries & Conservation*

Hydrological patterns can

- Enhance productivity (productive seamounts <1500 m)
- Play an important role in benthic coupling-pelagic coupling (trapping of DSL)

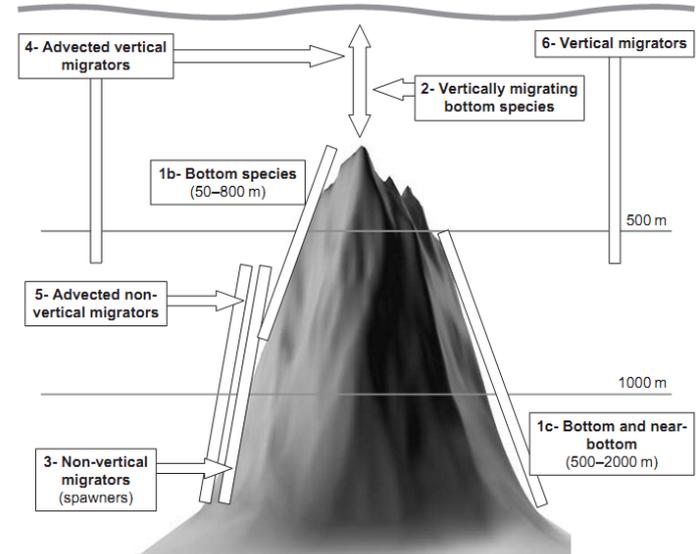

# Hydrological patterns

Bottom trapping of vertically migrating zooplankton Interaction between different guilds of deep-sea fish

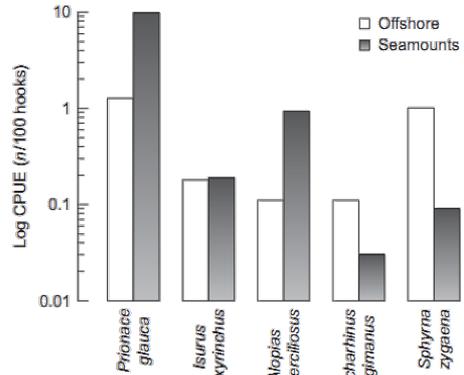

- DSL trapping affects pelagic and benthic communities

## squids

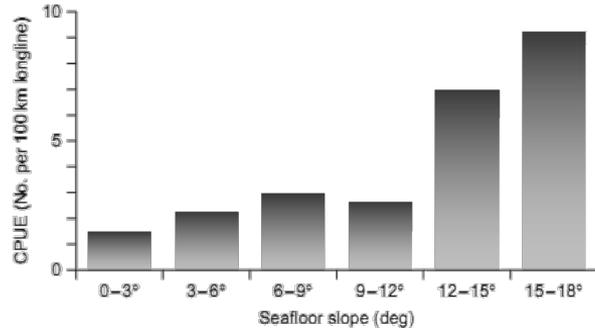

# Hydrological patterns

## sharks

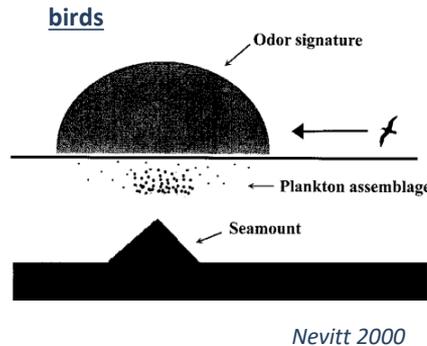

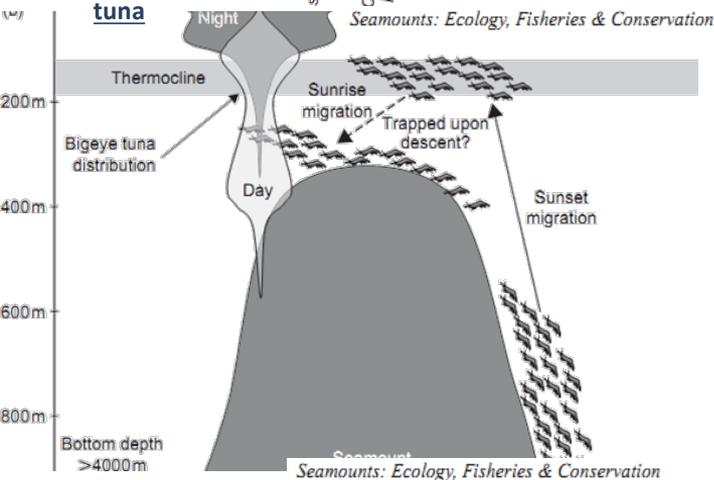

## loggerheads

- Attract to seamounts
  - highly migratory species
  - birds and mammals

## mammals

Species	Geographic region/ seamount	Strength of evidence	Source
Baird's beaked whale	North Pacific	Qualitative observation	Ohsumi (1983), Balcomb (1989), Reeves and Mitchell (1993)
Dall's porpoise	California Current System/Cordell Bank	Quantitative investigation of environment correlates	Yen <i>et al.</i> (2004), Tynan <i>et al.</i> (2005)
Humpback whale	California Current System/Hecate Bank	Quantitative investigation of environment correlates	Tynan <i>et al.</i> (2005)
Short-finned pilot whale	California Current System	Quantitative investigation of environment correlates	Hui (1985)
Common dolphins	California Current System	Quantitative investigation of environment correlates	Hui (1985)
Spinner dolphins	Hawaii	Indirect evidence based on feeding and diurnal tracking of mesopelagic boundary layer	Benoit-Bird and Au (2003)
Southern elephant seals (juveniles)	South Pacific/ De Gerlache Seamounts	Qualitative observation based on tagging data	Bornemann <i>et al.</i> (2000)
Crabeater seals	Antarctic waters near Queen Maud Land	Qualitative observation based on tagging data	Nordoy <i>et al.</i> (1995)

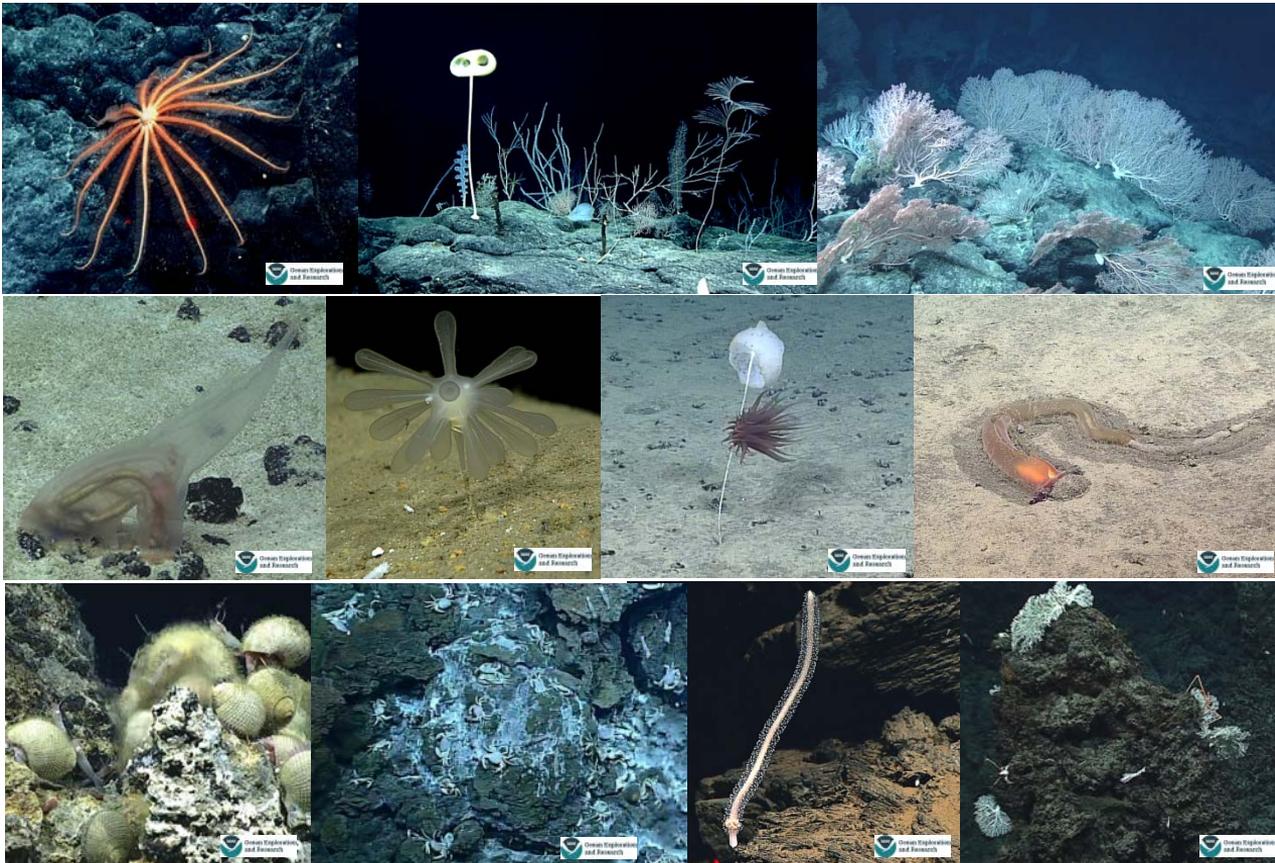

Seamounts: Ecology, Fisheries & Conservation

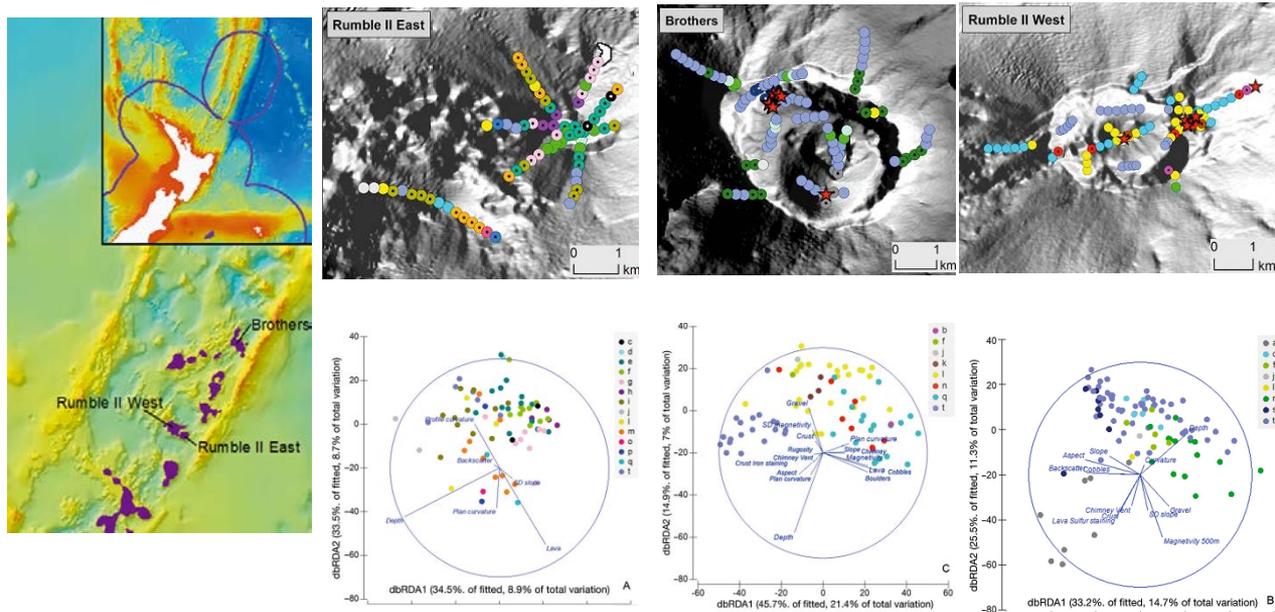

# Benthic assemblages

- Hard substrate communities
- Soft sediment communities
  - top of guyots
  - soft-sediment pockets
- Chemosynthetic ecosystems
  - vents
  - peripheral zone

# Benthic community structure

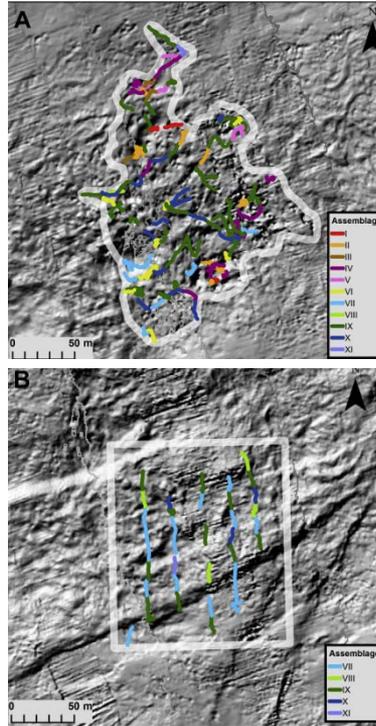

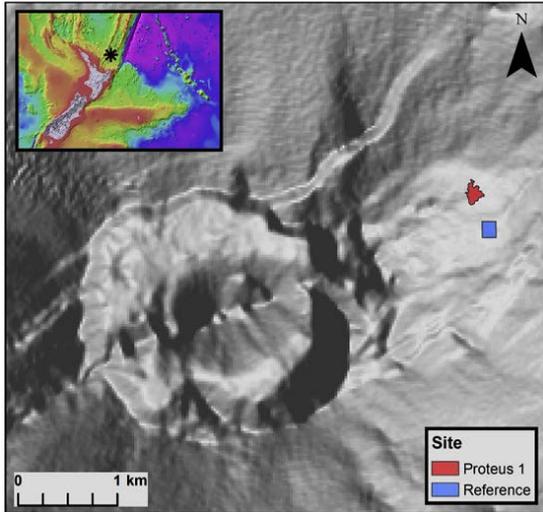

## Between seamounts

- Based on video profiling of three NZ seamounts (51 transects)
- 20 assemblages (14, 8, 8), including 13 unique
- only 3 assemblages present in all 3 seamount studied
- 4 assemblages in any 2 of 3 seamount studied

Boschen et al.: Megabenthos of three New Zealand seamounts

	a	b	c	d	e	f	g	h	i	j	k	l	m	n	o	p	q	r	s	t
<b>RUMBLE II E</b>			x	x	x	x	x	x	x	x		x	x		x	x	x			x
<b>BROTHERS</b>	x			x		x				x	x							x	x	x
<b>RUMBLE II W</b>	x					x				x	x	x		x			x			x

# Benthic community structure

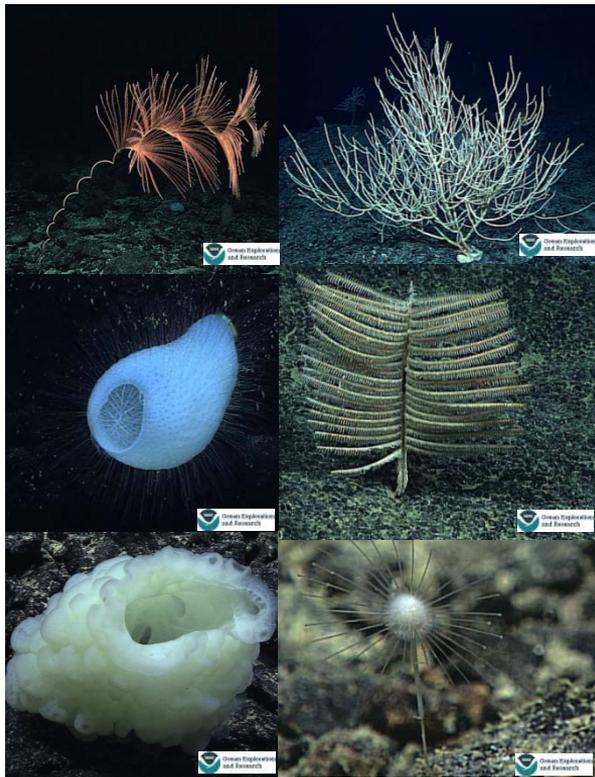

## Within seamount

- Two sites studies (Proteus 1 and reference site)
- 42 putative taxa from 152 transects
- 11 assemblages
- 6 assemblages unique for Proteus 1; five for both sites; no unique assemblages for the reference site

Boschen et al.: Megabenthos of three New Zealand seamounts

<b>PROTEUS I</b>	x	x	x	x	x	x	x	x	x	x	x
<b>REFERENCE</b>							x	x	x	x	x

# Benthic assemblages

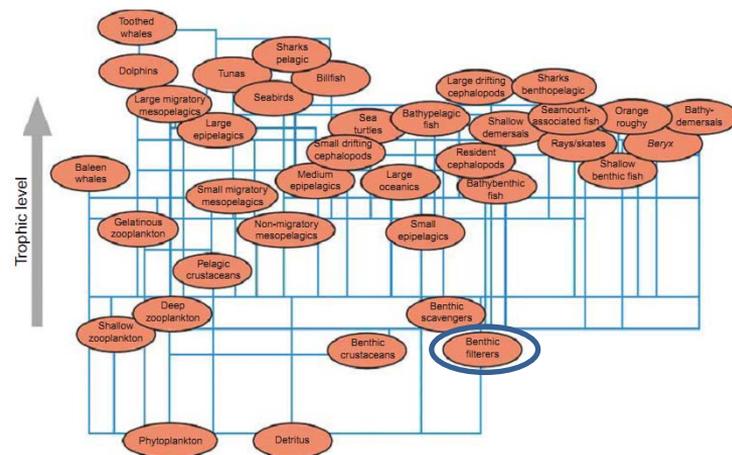

Nevitt 2000

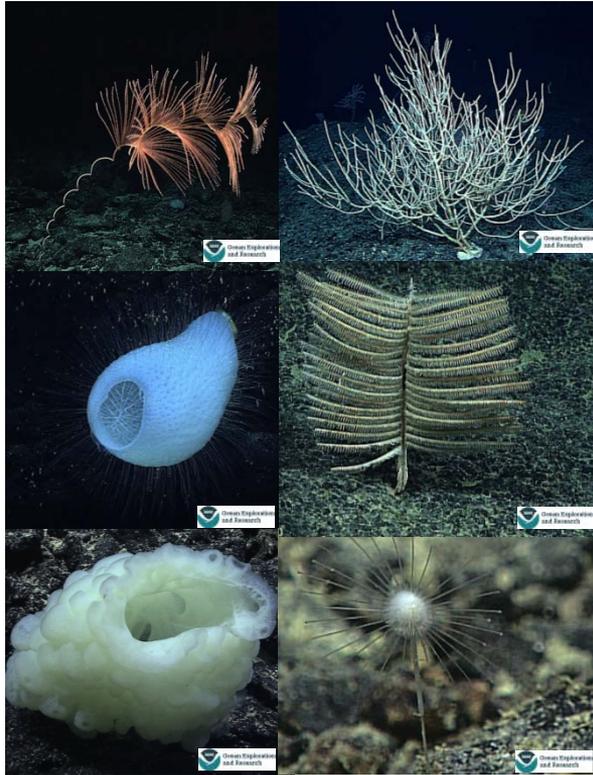

## Filter feeders

- Important component of ecosystems
- Play an important role in benthic coupling-pelagic coupling

Seamounts: Ecology, Fisheries & Conservation

# Benthic assemblages

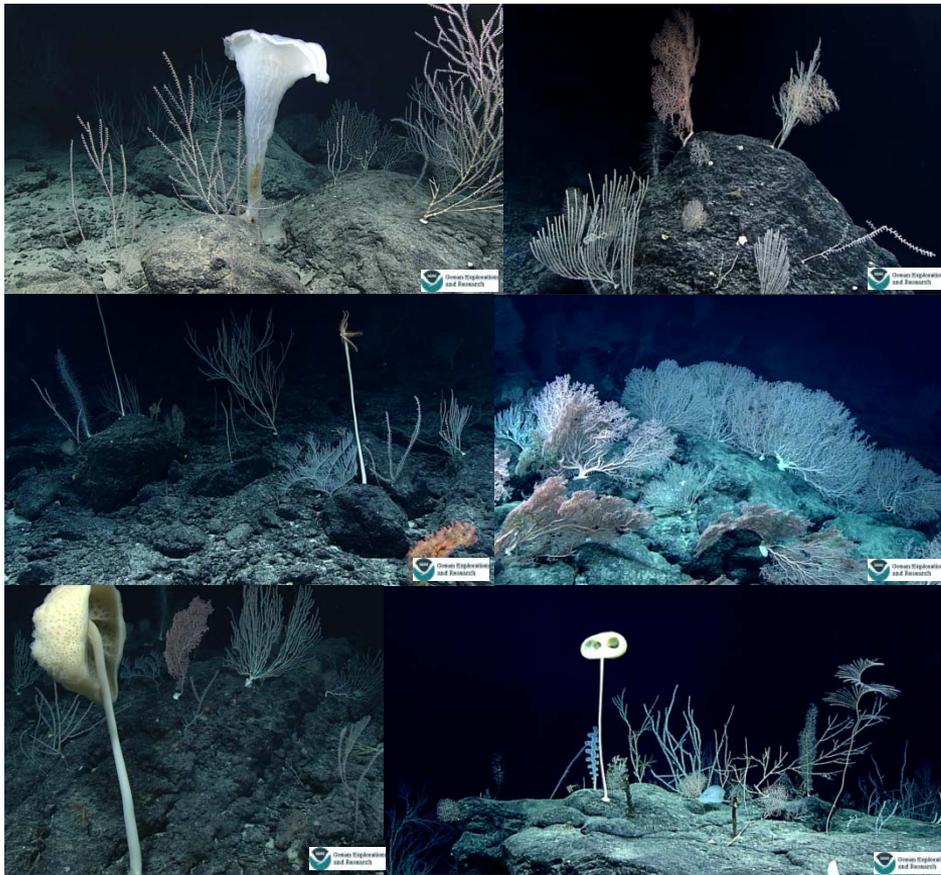

## Filter feeders

- Important component of ecosystems
- Play an important role in benthic coupling-pelagic coupling

## Sponge and corals

- Habitat-forming organisms enhancing biodiversity
- Host reach associated fauna
- May play a crucial role as a refuge, feeding ground and nursery for fish and invertebrates

# Benthic assemblages

## CAPSTONE at a Glance

-  over 635,000 km<sup>2</sup> of seafloor mapped
-  333 primary biological & 278 geological samples collected
-  187 ROV dives at a depth range of 250 - 6,000 meters
-  over 260 participating scientists, students, and managers
-  8.4 million live video views via YouTube and over 8 million additional live video views via other outlets such as Facebook

## Known High Density Mn-Crust Communities By the End of CAPSTONE

Region	Location	Known Prior to CAPSTONE	Found During CAPSTONE	Total
Central Pacific	PMNM	3	7	28
	PRIMNM-Johnston	0	5	
	MHI	0	2	
	Musicians	0	11	
South Pacific	Am Samoa	0	3	11
	PRIMNM-Howland&Baker	0	1	
	PRIMNM-Jarvis	0	1	
	PRIMNM-Palmyra&Kingman	0	0	
	PIPA	0	5	
West Pacific	Marianas	0	3	7
	PRIMNM-Wake	0	4	
<b>Total</b>		<b>3</b>	<b>43</b>	<b>46</b>

# Seamount sponges and corals

## The largest sponge in the world?

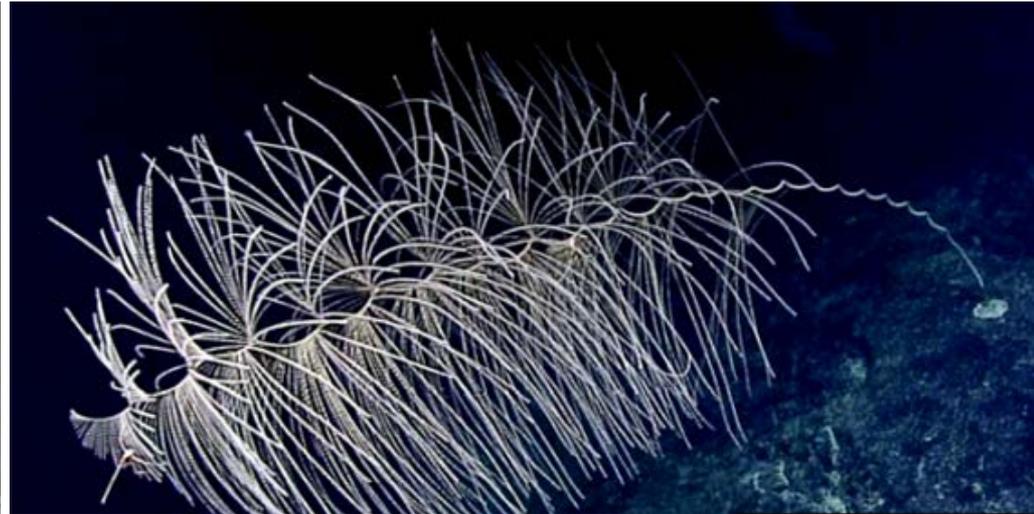

Daniel Wagner<sup>1</sup> · Christopher D. Kelley<sup>2</sup>

*Rossellidae* (Lanuginellinae) 3.5 x 2.0 x. 1.5 m  
(Hawaii, Papahānaumokuākea MNM)

## The World's largest known Gorgonian

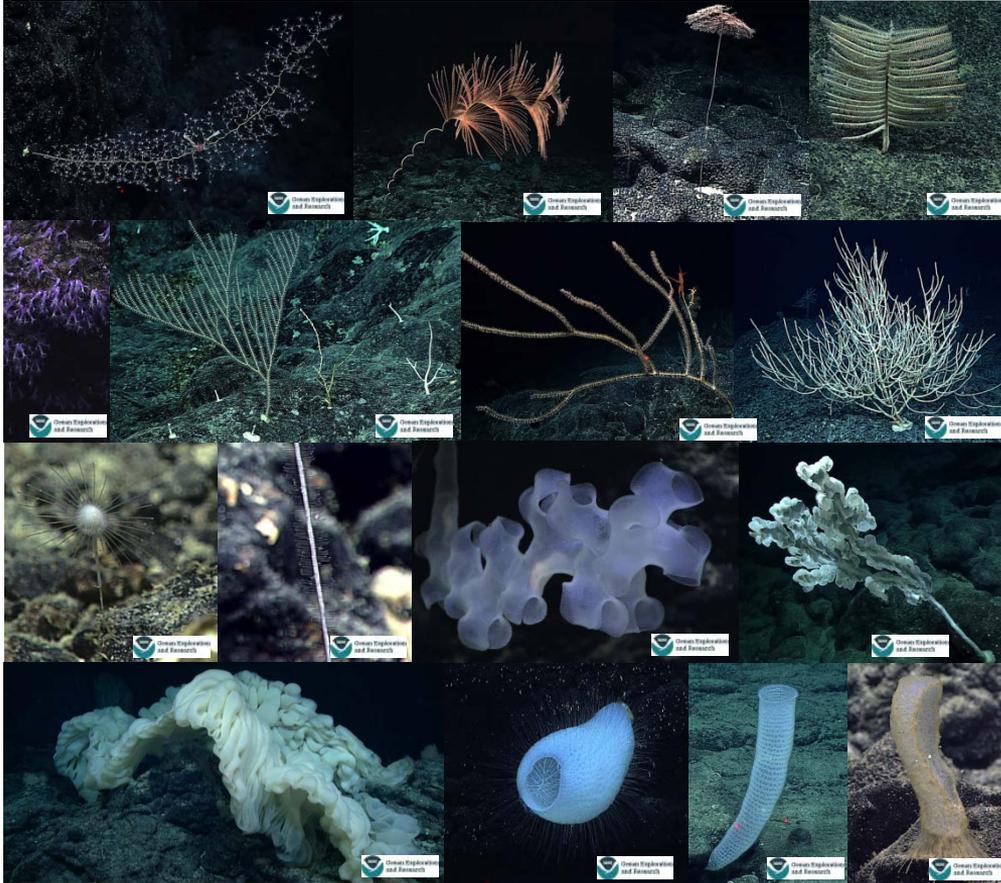

LES WATLING<sup>1</sup>, SONIA ROWLEY<sup>1,2</sup> & JOHN GUINOTTE<sup>3</sup>

*Iridogorgia magnispiralis* 5.7 m tall  
(Hawaii, Twin Banks)

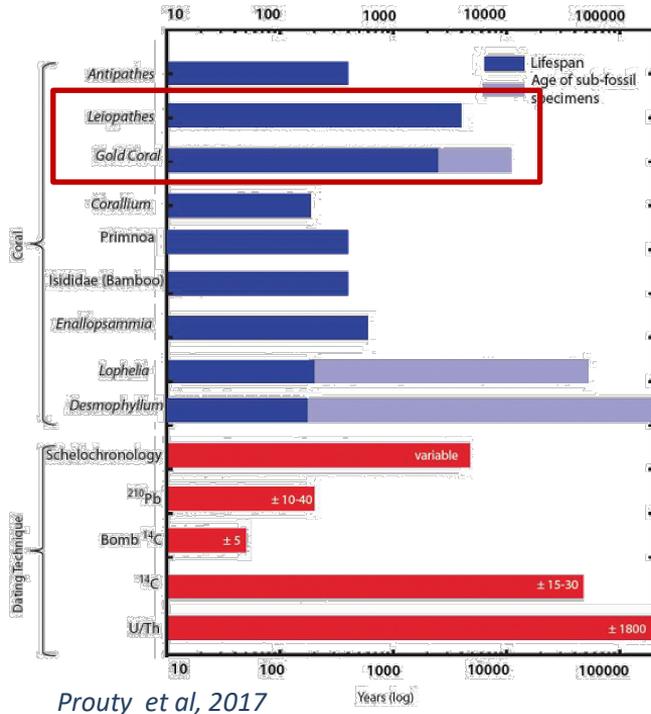

# Seamount sponges and corals

- Characteristic seamount taxa present
- Patchy distribution.
- Density increases at the ridges and crests. Highly affected by hydrology

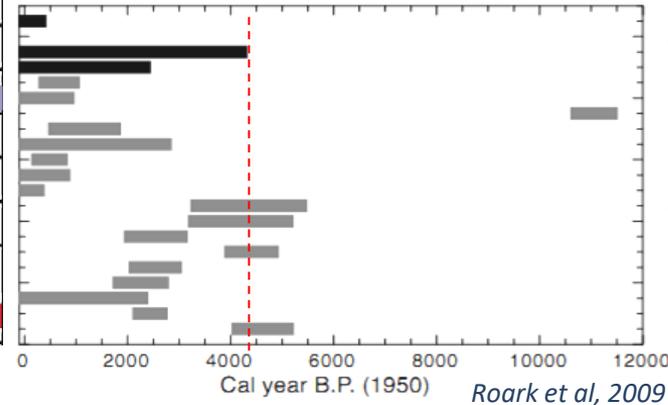

# Seamount sponges and corals

## Maximum lifespan of several key deep-sea corals

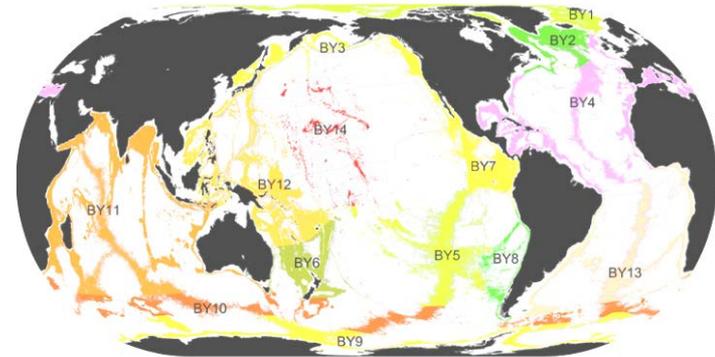

Life spans of *Gerardia* sp. and *Leiopathes* during the Holocene.

- Characteristic seamount taxa present
- Patchy distribution.
- Density increases at the ridges and crests. Highly affected by hydrology
- Predominantly long-living and slowly growing
- Estimations of recovery rates: decades and hundreds of years
- Vulnerable to any anthropogenic impact

# Gaps and concerns

- Predictive models of distribution and biogeography are based on abiotic factors
- Limited sampling
  - number of seamounts sampled
  - depth range covered
  - size classes included (<10 cm is usually neglected)
- Lack/ incomparability of sufficient taxonomical expertise
- Limited data on individual taxa
  - life cycles,
  - larval dispersal,
  - connectivity,
  - gene flow

L. Watling et al./Progress in Oceanography 111 (2013) 91–112
